

VPS SMARTDOOR

HIGH SECURITY KEYLESS STEEL DOOR WITH INDUSTRY-LEADING BLUETOOTH, ENABLING ACCESS WHEN YOU NEED IT.

A high security steel door with three-point locking and concealed heavy duty hinges, the VPS SmartDoor helps protect properties and unmanned locations from theft, unauthorised access, trespassers or squatters, while allowing legitimate visitors easy access whenever needed.

This new door eliminates the need for accompanied access visits, as there is no need to meet anyone to collect keys or provide access. Users can be given remote access as and when needed and for an agreed period of time. In addition to all the security benefits of the door itself, the lock also acts as an access reporting system as it gathers detail on who accessed the property and at what time the door was unlocked.

AT A GLANCE:

- High security steel door with three-point locking and concealed heavy duty hinges
- Allows authorised visitors easy access whenever needed
- Secure fixing system to ensure no damage to the fabric of the property
- Features in-built bluetooth enabled VPS SmartLock
- Intuitive remote unlocking using custom-built mobile phone app
- Temporary, time-restricted access codes generated through app
- Unique codes can be granted to those without smartphone access
- Lock acts as an access reporting system
- Optional alarm integration, de-arming the alarm when the door is unlocked
- Can be installed with VPS Decals, working to disguise the appearance of steel security

KEY BENEFITS

THE DOOR

- VPS SmartDoor is a high security steel door with three point locking and heavy duty hinges. The VPS SmartDoor helps protect your property from vandals or trespassers when it's empty while allowing legitimate visitors easy access whenever needed.
- Tough design incorporates VPS-designed features based upon our industry knowledge into issues commonly facing customer sites and the ever evolving criminal activity.
- Hinges and locks are cleverly located and totally concealed to ensure the door is free of weak points and tough enough to withstand the harshest environments.
- The door is fixed to the existing opening using our secure fixing system so causes no damage to the fabric of the property.

THE LOCK

- In-built bluetooth-enabled VPS SmartLock allows for intuitive remote unlocking using a custom-built mobile phone app on any Android or Apple smartphone.

- App can be configured to grant temporary access to any authorised visitors without the need to meet anyone to collect keys, so totally eliminates the need for accompanied access visits.
- Users can be remotely added or removed within seconds.
- Where the app can't be used VPS can supply netcodes, providing access without use of a conventional key or smartphone. Authorised entrants are provided with a 6 digit netcode, issued by VPS to their mobile devices by text or email (based on authorised customer request) giving them entry by inputting this number using the keypad.
- Access is specific to a particular door and can also be time bound which means you can restrict access to a particular date or time range.
- In addition to all the security benefits of the door itself, the lock also acts as an access reporting system as it gathers detail on who unlocked the door, including the time the door was unlocked.
- VPS SmartLock has undergone rigorous testing including heat and freeze testing.

- The lock, containing a long life battery, allows for safe emergency exit for those inside the property as it doesn't rely on keys or power, and as long as the app and electronic key are downloaded when in an Internet enabled area, mobile phone signal is not required to open the door.
- Optional interface allows seamless integration with VPS SmartAlarms, negating the need for additional alarm codes & keys.

VPS DECALS

- VPS SmartDoor can be fitted with a variety of VPS Decal options so as to make the steel security door blend in with its surroundings. VPS Decals provide an innovative and effective way of allowing your property to stay secure whilst vacant, without looking obviously unoccupied.
- The Decals are made to suit the property type and do not compromise the effectiveness of the door in any way.
